Exchange Lemon Products Collection

c. 1927-1988 (predominantly 1927-1939) 97 textual records | 1 linear foot | 2 boxes

In 1915, California Fruit Growers Exchange organized a company, the *Exchange By-Products Company* to manufacture by-products from lower grades of lemons. Corona was chosen because it occupied a central position in the lemon producing area, because there were good rail facilities from the groves to Corona, and from there to marketing centers and finally, because the Queen Colony Fruit Exchange had donated a factory site for the proposed plant. The company's membership was the same as the California Fruit Growers Exchange, although maintaining a separate board of directors. The business was handled on a cooperative basis with the growers receiving the full returns for by-products after the cost of operation was deducted. Originally, the plant processed lemons for citric acid and lemon oil. By using everything from peel to pulp processing not only expanded markets but helped to limit the potential of lower prices that could result from too much fresh fruit going to markets. In 1921 the name was changed to *Exchange Lemon Products Company* to differentiate it from orange processing plants. By 1924, the company had added pectin which was developed by the Exchange's Research Laboratory. Juice products began shipment in 1923 but not until 1950 when the expanding market for frozen concentrate of lemonade required a greater emphasis on juice products. In 1958, the product specification list was 227 items.

In 1958 the Exchange Lemon Products Company merged with Sunkist Growers, Inc. in order to ensure the most effective use of the processing plants and their marketing capabilities. It became known as the *Lemon Products Division for Sunkist Growers, Inc.* The main purpose of this division was again the processing of surplus lemons from the Sunkist Lemon Packing Associations into valuable products highly useful to the company. In January 1981, Sunkist announced it had decided to shut down most of the Corona processing plant by 1982. The reasons for the decision were as follows: most of the Corona Plant was built about sixty years previously and was obsolete. Second, there had been a gradual shift of the citrus growing region out of Southern California to Central California. Finally, the company had a large problem meeting the local environmental control specifications. All operations ceased in 1983 when Sunkist opened a new facility in Tipton.

This collection consists of administrative records (1926-1981); laboratory reports (pectin reports1927-1939, misc. company reports 1927-1967); information files (1921-1988); marketing records (1947-1979)
